

MULTI-AGENT RUNTIME STACK

Review scope

ORCHESTRATION LAYER

context only · well surveyed elsewhere

Workflow frameworks

LangGraph / CrewAI

Agent orchestration

coordination / routing

Multi-agent SDKs

execution / tools

DIAGNOSTICS LAYER (§3)

retain evidence for diagnosis

Failure localization · §3.1

responsible agent / step

Observability · §3.2

traces / provenance

Safety · §3.3

guardrails / intervention

Benchmarks · §3.4

failure / reliability

retain →

SHARED RUNTIME STATE / RETENTION BUDGET

traces | KV state | environment snapshots | execution context

→ discard / reclaim

INFRASTRUCTURE LAYER (§4)

serve within memory / latency / power budgets

Memory optimization · §4.2

prefetch / eviction

Prefix-aware scheduling · §4.2

place / route

Cache lifecycle · §4.2

reuse / TTL

Power management · §4.2

resource states
